Company Profile

Founded in Hong Kong in the 1980s, DICKSON Furniture established its presence in 1981 and expanded into Mainland China's Guangdong Province in 1984. Like many Hong Kong-owned furniture enterprises that were among the earliest to enter the Mainland market, DICKSON faced intense competition and numerous challenges.

Driven by a commitment to excellence, the brand continuously explored new directions and possibilities. Guided by forward-thinking vision, meticulous craftsmanship, and an unwavering pursuit of quality, DICKSON has cultivated a distinctive path of growth and achievement.

Over more than four decades of dedication and perseverance, DICKSON has brought together the expertise of thousands of skilled craftsmen and professionals. Through rigorous production standards, innovative design talent, and uncompromising attention to detail, the company remains devoted to fulfilling its service philosophy: "To take responsibility for every customer who chooses and trusts DICKSON."

About Dickson Leung

Dickson Leung, Founder and Chairman of DICKSON Furniture, is a furniture product designer and interior space planning specialist. He also serves as President of the International Federation of Interior Architecture & Decoration (Hong Kong) and Honorary President of the Hong Kong Furniture & Decoration Trade Association.

Throughout his career, Mr. Leung has remained committed to the core principles of aesthetics, ergonomics, practicality, and durability. With decades of dedication to furniture design, he has cultivated a profound understanding of residential living and spatial design, leading DICKSON to establish a distinguished reputation within the industry.

In 2012, Mr. Leung led the DICKSON team in pioneering the concept of “Home Furnishing Industrialization”, breaking away from the limitations of traditional home decoration models and driving innovation and transformation within China’s home furnishing industry through practical action and visionary thinking.

Design Concept

For more than four decades, DICKSON Furniture has remained deeply committed to original design, guided by four enduring design principles: “aesthetics, ergonomics, practicality, and durability” . Rejecting imitation and short-lived trends, DICKSON insists on 100% in-house research and development, using original design to shape the direction of modern Chinese furniture.

From the Beechwood Collection and White Oak Collection to the iconic Walnut Collection, and from interior concepts such as Summer Lavender and Autumn Wheat Fields to the Sunrise Mirage home furnishing series, DICKSON continuously draws inspiration from nature and the essence of Eastern living. By blending clean modern lines with the understated elegance of Oriental culture, the brand has created its distinctive design language — “Luxurious Minimalism.” Each piece embodies both an international perspective and a sense of local warmth.

With over forty years of dedication to craftsmanship and innovation, DICKSON has earned more than 80 design patents and 14 international furniture and interior design awards, including the prestigious Grand Award of the Golden Pin Committee at the China International Furniture Fair. These achievements have established DICKSON as a benchmark for original design within the industry.

At DICKSON, furniture is never created merely to sell — it is designed to be truly lived with. Every dimension is refined through ergonomic consideration, and every detail is perfected through meticulous craftsmanship. The result is furniture thoughtfully tailored to modern lifestyles, balancing aesthetics, structural integrity, functionality, and long-term durability.

This is the philosophy DICKSON has upheld from the very beginning:

“True design is measured not only by how it looks, but by how beautifully it serves everyday living.”

Development History

1981

Dickson Leung founded the DICKSON Furniture brand in Hong Kong.

1984

In response to China's Reform and Opening-up policy, DICKSON relocated its manufacturing base to Dongguan, Guangdong.

1992

Launch of the Formula Silk Collection.

1990

Launch of the Fantasy Collection.

1994

Launch of the Beechwood Collection.

1999

Launch of the Beechwood & Black Walnut Collection.

2002

Launch of the
White Oak Collection.

2004

Launch of the
Lavender Collection.

2006

Launch of the
High Gloss Collection.

2008

Expansion into the integrated home
furnishing sector, participating in
villa interior design and turnkey de-
coration projects, pioneering the
“Furniture + Design”
business model.

2010

Launch of the
Rose Gold Collection.

2012

Introduction of the
Industrialized Home
Interior System model.

2014

Launch of the
Autumn Wheat Fields
Interior Collection.

2016

Launch of the
Summer Lavender Interior Collection.

2017

Launch of the
Sunrise Mirage Interior Collection.

2018

Launch of the
Winter Silhouette
Interior Collection.

2023

Launch of the
Marble Craftsmanship
Collection.

2024

Launch of the
DFQ6810 Kitchen Cabinet
Series.

2025

Launch of the
Outdoor Furniture Collection.

**More exciting
innovations to come...
Stay tuned.**

Brand Honors

Since 1996, DICKSON Furniture has received numerous prestigious awards in both domestic and international competitions, reflecting its outstanding design excellence and innovation. From 1996 to 1999, DICKSON won the championship title in the Living Room Furniture Category at the International Furniture & Woodworking Machinery Fair (Shenzhen) for four consecutive years, a remarkable achievement that demonstrated the industry-leading strength of its design philosophy.

In March 2002, DICKSON was awarded the First Runner-up for Best Exhibit at the 19th Singapore International Furniture Fair – Asian Furniture Exhibition, further expanding the international influence of the brand's design vision.

In September 2016, DICKSON once again showcased its exceptional design capability by receiving the prestigious Grand Award of the Golden Pin Committee at the 22nd China International Furniture Fair.

Red Dot Award
Chairman
Peter Zec

“ I am delighted that you achieved first place this year and became the recipient of the Golden Pin Award's highest honor — the Committee Grand Award. Through your work, you have created products capable of leading all of us into the future.”

”

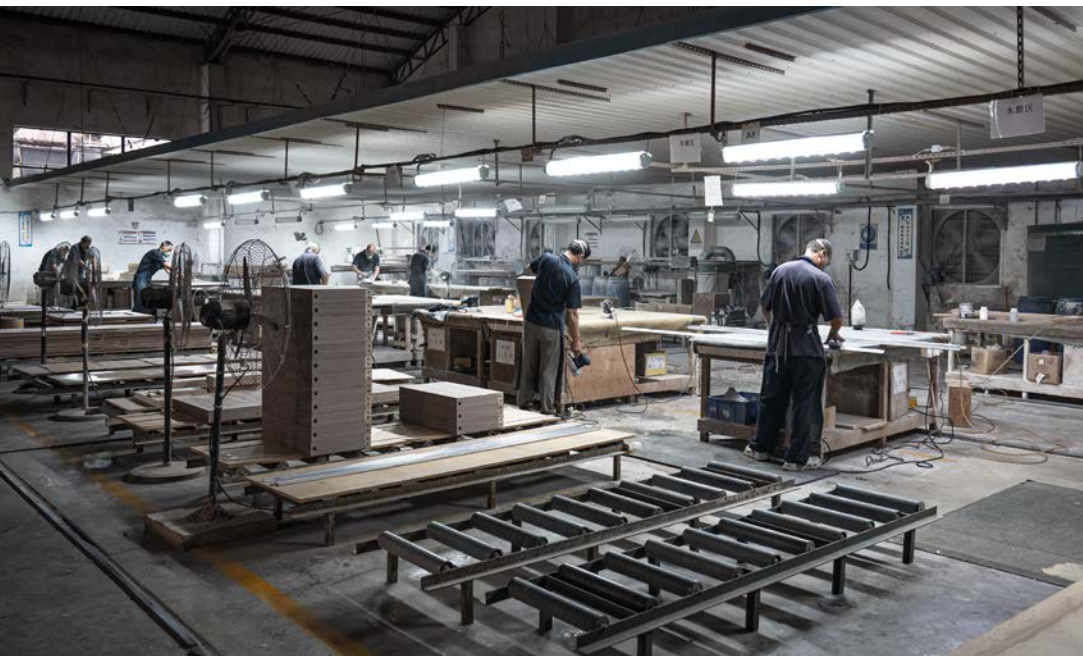

Production Factory

In 1990, DICKSON Furniture established its roots in Houjie, Dongguan, where it built a modern manufacturing base spanning over 60,000 square meters. Integrating research and development, production, administration, and supporting facilities under one roof, the complex became the cornerstone of DICKSON's expansion from Dongguan to the nationwide market.

As one of Dongguan's earliest Hong Kong-invested furniture enterprises, DICKSON has spent more than four decades refining its expertise. This manufacturing base has witnessed the brand's transformation from a furniture maker focused on individual products into a pioneer of industrialized whole-home furnishing solutions, setting new benchmarks for high-end home manufacturing.

Imported Machinery

▼ Italian Cefla Automatic Finishing Line

An industry-leading Italian manufacturer of industrial automated finishing systems, Cefla integrates automated conveying systems, curing ovens, and wastewater treatment units into a complete finishing solution. Renowned for its efficiency, precision, and reliability, the system enables consistent and uniform application of a wide range of coatings, ensuring outstanding adhesion, abrasion resistance, and surface gloss. It is an essential large-scale production system for achieving premium-quality furniture finishing.

▲ Italian COSTA Heavy-Duty Automatic Sanding Machine

Specially imported from Italy, this industrial-grade sanding system is equipped with a heavy-duty sanding frame structure and high-torque motors, enabling stable and precise fine sanding for large-format panels. Featuring an advanced CNC control system, the machine supports preset processing parameters and automatically adjusts sanding belt pressure and speed, ensuring exceptional consistency in surface finishing quality.

▲ Italian PADE 5-Axis CNC Machining Center

The PADE 5-axis CNC machining center utilizes multi-axis synchronized movement and intelligent machining strategies to efficiently process highly complex and high-precision components. As a core technology in modern premium manufacturing, it delivers exceptional flexibility, accuracy, and production efficiency for sophisticated furniture craftsmanship and advanced customized manufacturing.

DICKSON Furniture utilizes advanced production equipment imported from Germany and Italy, combined with modern management systems, to manufacture high-quality contemporary home furnishings. While today's technological advancements and CNC production systems can ensure consistency in form and manufacturing precision, DICKSON has always remained firmly committed to a philosophy centered on true quality:

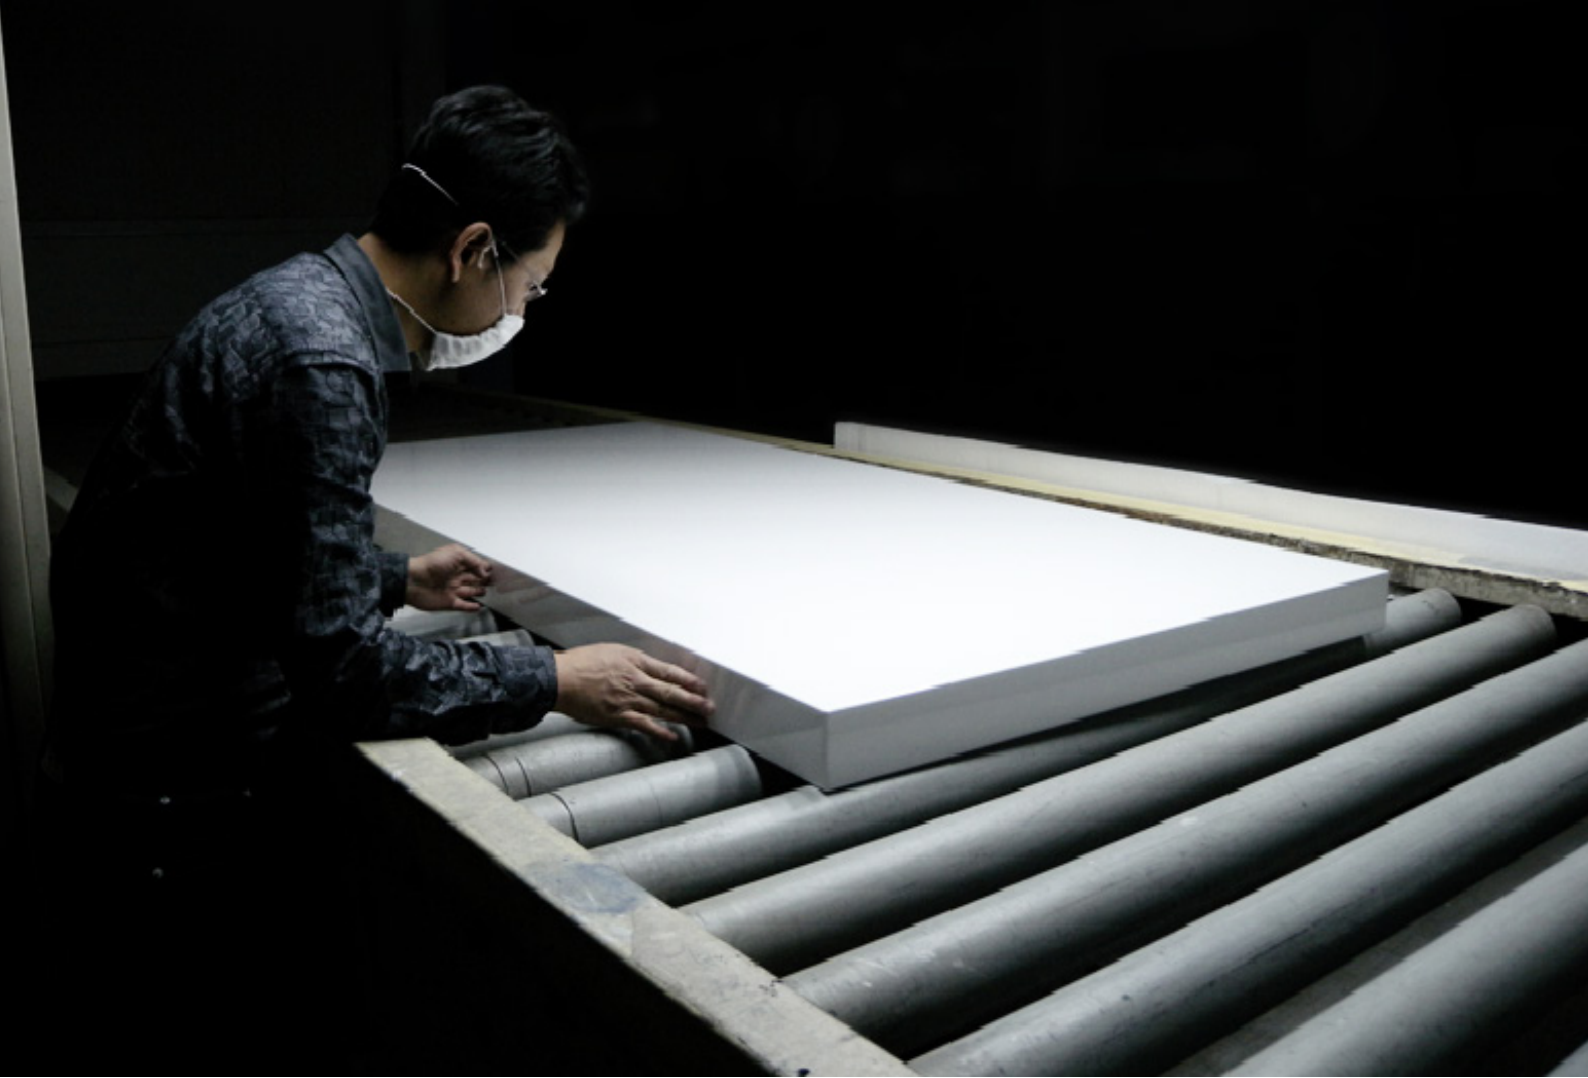

“Drawing inspiration from and surpassing international premium standards, while rejecting the homogenization of furniture design.”

Through this philosophy, DICKSON creates furniture distinguished by its unique style and rich design character. Beyond redefining the scope and standards of conventional craftsmanship, the brand is devoted to expressing a new vision of refined living through every detail — this is precisely what sets DICKSON apart from other furniture manufacturers.

Today, DICKSON Furniture has been widely recognized by both industry professionals and discerning consumers as a premium furniture brand. While many attempt to imitate the appearance of DICKSON products, their quality, design language, and creative spirit remain impossible to replicate.

More than 40 years of success have proven one enduring truth: “Classics never go out of style.”

Quality Craftsmanship

▲ Finishing Craftsmanship

Every high-gloss panel produced by DICKSON undergoes a rigorous four-layer finishing process, consisting of two coats of UV primer and two coats of PU high-gloss topcoat.

After each coating application, the surface is precision-calibrated and sanded using large-scale professional sanding equipment to remove even the finest surface imperfections, ensuring every layer remains perfectly smooth, evenly balanced, and firmly bonded.

Upon completion of the finishing and sanding stages, each product enters a final refinement process featuring high-speed wool buff polishing. The constant heat generated during the polishing process further densifies and cures the coating molecules, resulting in a crystal-clear, mirror-like surface with an exceptionally refined touch. At the same time, this process significantly enhances gloss richness, coating hardness, scratch resistance, and abrasion durability — effectively overcoming the common industry challenges associated with high-gloss furniture surfaces, such as scratching and visible marking.

“If dedicating 65% of one's effort can achieve 95% of the result;
then, dedicating 95% of one's effort becomes something priceless.”

—— Dickson Leung

◀ Genuine Leather Selection & Layout Optimization

Every piece of premium top-grain leather imported from Italy and selected by DICKSON undergoes an exceptionally strict manual inspection process. Quality inspectors carry out a meticulous 100% examination of the entire hide, carefully identifying and marking any natural imperfections that may affect the appearance or durability of the sofa, including tendon marks, growth scars, natural grain variations, and color inconsistencies.

Before cutting and layout arrangement, all imperfections are strategically avoided to ensure that every leather section used in production maintains a consistent texture, appearance, and premium visual quality.

Solid Wood Quality Control ▶

To ensure consistency in the texture and visual character of natural wood, DICKSON implements highly stringent and standardized quality control procedures. Every timber material is carefully selected, with close attention paid to veneer grain direction, texture continuity, and tonal consistency.

In addition, each furniture component is engraved with an exclusive identification code, discreetly marked on concealed areas of the piece.

This traceability process — commonly found only in premium European luxury furniture manufacturing — allows precise matching of components from the same material batch and grain pattern during production. As a result, every furniture set achieves a harmonious and unified appearance while ensuring full production traceability for each individual component, fundamentally preventing issues such as color variation and inconsistent grain patterns.

▲ Durability Testing

To ensure outstanding structural durability, every DICKSON chair undergoes rigorous high-standard strength testing. Drawing on the principles of automotive impact and load-bearing analysis, each chair is repeatedly subjected to pressure, vibration, and impact simulation tests to thoroughly evaluate frame stability, structural load capacity, and fatigue resistance.

This strict testing process guarantees long-term performance without deformation or looseness, ensuring the furniture withstands years of intensive daily use and the test of time.

▲ Rounded Edge Craftsmanship

DICKSON Furniture insists on multiple stages of precision polishing for every edge and corner, followed by its signature rounded-edge finishing process. The result is a design language defined by smooth flowing lines, understated elegance, and a refined tactile experience.

Beyond aesthetics, this thoughtful detailing effectively minimizes accidental bumps and impacts in daily living, achieving the perfect balance between visual sophistication and home safety.

◀ Drawer System

Drawers are among the most frequently used components in furniture. In conventional furniture, drawers often become loose due to cracking at the connection between the drawer front and side panels, while inferior runners may bend, deform, or lose smooth functionality over time.

To address these issues, DICKSON drawer side panels are constructed using premium Russian multi-layer birch plywood, offering durability several times greater than ordinary plywood or MDF materials. Even after years of use, the structure remains stable and resistant to warping or deformation.

At the same time, DICKSON drawer runners are sourced from the renowned German brand “Hettich”, a name with more than a century of engineering heritage and a recognized benchmark for quality within the industry. All runner systems are certified by Germany’s authoritative LGA testing standards, ensuring a service life exceeding 100,000 smooth opening and closing cycles under normal use conditions.

Materials

American Black Walnut

Dickson carefully selects imported American black walnut lumber and veneers, an exceptionally precious hardwood known as the “King of Hardwoods” in America. It features naturally flowing grain patterns, a warm and refined color tone, and an understated luxurious natural texture.

Italian Marble

Dickson uses 18mm-thick natural marble, including Bianco Carrara (fish-belly white) and fish-belly gold marble. The stone is sourced from Italy’s Carrara region and is extremely limited in supply due to its unique natural veining. It is highly favored by designers and homeowners for its material quality, distinctive patterns, and excellent surface finish.

Italian Full-Grain Aniline Leather

Imported from Italy, this leather is made from selected Nordic lightweight bovine hides using full-grain, water-based semi-aniline finishing techniques. Through dyeing, natural tumbling, vacuum drying, light polishing, and drum ironing, the leather achieves a refined texture. It features delicate natural grain, visible pores, a soft and skin-friendly touch, excellent elasticity, and a rich, evenly luminous natural finish.

Italian Fabrics

Italy has a long-standing textile manufacturing heritage with continuously evolving craftsmanship. Its innovative design language and strict production standards give it a distinctive global competitive edge. The fabrics are made from high-quality fibers and yarns, ensuring comfort, high density, durability, and structural strength.

Italian High-Gloss PU Coating

Dickson selects premium Italian-brand “RENNER” PU high-gloss coating. It follows a piano-grade finishing process with multiple layers of primer and topcoat, carefully applied through precision spraying. High-speed wool pad polishing results in an ultra-smooth, mirror-like surface with a warm jade-like finish. The coating is durable, scratch-resistant, stain-resistant, low-odor, and environmentally friendly, ensuring lasting elegance and making each furniture piece an artistic statement in any space.

Aluminum Profile

Dickson products use 6063 industrial-grade aluminum profiles. After polishing, brushing, or sandblasting, followed by anodizing treatment, the surface achieves high gloss, refined appearance, and strong decorative effect, free from scratches or white marks. The anodized finish provides excellent corrosion resistance and long service life, ensuring the surface remains color-stable and glossy for many years.

German Hettich Hardware

German Hettich hinges feature a square spring-loaded bearing structure with three-dimensional adjustability and stable construction. Manufactured with excellent craftsmanship, they pass a 24-hour neutral salt spray test, ensuring durability and long service life. The hinges are easy to install and remove for cleaning and maintenance, and are equipped with silent damping and a large transmission arm, enabling smooth and noiseless operation.

New Zealand MDF

Imported from New Zealand, the MDF features uniform density, strong physical stability, and a smooth surface with excellent structural integrity. It is especially suitable for veneer application, coating, and various woodworking machining processes. In terms of environmental performance, it meets Japan’s highest F4 Stars standard, with formaldehyde emission levels as low as natural solid wood.

Cooperative Suppliers

Dickson sources premium branded products worldwide and maintains long-term strategic partnerships with its suppliers. From large household appliances to small hardware components, Dickson operates a unified procurement system that fully ensures product quality and consistency.

Sustainable Eco-Standards

Dickson is committed to the use of eco-friendly and sustainable materials, eliminating potential hazards such as formaldehyde at the source to provide customers with a healthy and comfortable living environment.

We strictly select globally certified green materials: our panels comply with both Japan's F4 Star standard and China's Super E0 grade, with formaldehyde emissions as low as natural solid wood. Italian water-based coatings are used, with solvent content below 5%. The foam materials comply with the EU REACH environmental standards and contain no inorganic fillers. Aluminum components are made from highly recyclable materials, and natural marble is carefully selected and environmentally verified. Every material is fully traceable and tested for compliance.

At the process level, we implement green manufacturing practices throughout production. Wood veneer wall systems are bonded using water-based adhesives, and finishing is completed with Italian water-based paints, significantly reducing VOC emissions from the source. Through industrial prefabrication and modular installation, on-site use of solvent-based thinners is reduced to less than 1% compared to traditional construction methods. Only minimal adhesive is used for veneer edge finishing, allowing move-in readiness within 10 days after installation and greatly reducing indoor pollution.

Our entire production system complies with the ISO 14001 Environmental Management System, ensuring standardized manufacturing that minimizes resource waste and environmental impact.

Residential Interior Design

Dickson Furniture is one of the first companies in the industry to propose and implement the concept of “industrialized home decoration.”

We provide customers with complimentary design services, where construction drawings are developed before renderings to ensure precision and feasibility. To enhance installation convenience and construction quality, we have industrialized the prefabrication of key interior finishing materials, delivering finished components produced in our factory system.

By leveraging industrial manufacturing and modular construction methods, we significantly improve overall quality while reducing on-site manual errors. More importantly, Dickson headquarters, retail stores, customers, and third-party contractors maintain close and continuous communication throughout the entire project process. Any questions or issues arising during on-site construction can be directly and promptly reported back to the factory headquarters for immediate resolution.

We are committed to fully integrating the resources of our manufacturing system through a drawing-based construction management platform, fundamentally solving the challenges of home renovation and delivering residential spaces that meet the highest standards of quality and customization for our clients.

All interior design solutions are led by Dickson's Chief Designer, Mr. Dickson Leung, who brings extensive life experience and design expertise to each project. Based on clients' individual needs and evolving lifestyle trends, he creates living spaces that offer comfort for family life while also serving as refined environments for business and social interaction, ultimately enhancing the functional value of the property.

Dickson Furniture covers the entire home space system. Each design scheme is carefully adjusted according to the functional specifications and rational usage of furniture. Elements such as wall-mounted panels, upholstered wall systems, wooden doors, and aluminum doors are all custom-designed according to spatial requirements.

In this approach, the space is designed to serve the furniture, while the furniture simultaneously becomes an integral part of the architectural space—rather than merely stand-alone household items.

Dickson Home Decoration Advantages

A Design Service

Dickson is one of the earliest furniture enterprises in China to introduce integrated home furnishing design. Its whole-home furnishing solutions combine the strengths of a traditional furniture manufacturer with interior design expertise, achieving a seamless integration between furniture characteristics and interior space design for optimal results.

Each project is personally guided through in-depth one-to-one communication between Chief Designer Mr. Dickson Leung and the client. A professional team provides end-to-end integrated services, including overall interior design, detailed construction drawing development, design refinement, and contractor training.

B Product System Integration

With more than 40 years of independent furniture R&D and manufacturing experience, Dickson offers a wide product portfolio covering high-end panel furniture, sofas, kitchen systems, wardrobes, decorative elements, and interior finishing materials. This allows us to address every corner of the home environment.

From living rooms, kitchens, dining areas, and bedrooms to bathrooms and outdoor spaces, Dickson provides a unified design language and coordinated furniture selection, achieving true whole-home integration.

C Product Quality

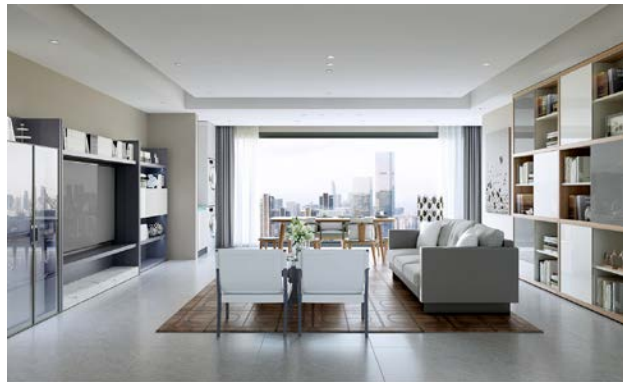

For more than 40 years, Dickson has maintained a strong reputation for outstanding product quality and holds over 80 design patents. Its materials are primarily sourced from Italy, Germany, and other countries, meeting both international and national environmental standards.

With deep expertise in furniture craftsmanship, functionality, durability, and aesthetics, Dickson ensures that every product delivers comfort, reliability, and long-lasting value for its users.

Projects

Dickson regards every home as a unique individual. Through thoughtful design, we integrate spatial planning, furniture, decorative elements, and soft furnishings to fully express the character and beauty of each living environment.

From full-scale interior planning to furniture-based space coordination without altering original layouts, Dickson has accumulated extensive project experience across both approaches. Since 2012, Dickson has completed and is currently executing over 1,500 high-end residential projects, ranging from 120 sqm apartments to luxury villas and duplex residences exceeding 1,000 sqm.

Construction Drawings

For every interior design solution, we provide a comprehensive set of detailed construction drawings—often exceeding one hundred sheets per project. These are further supported by axonometric diagrams to clearly illustrate structural details and installation logic.

To ensure standardized and professional construction quality, Dickson also assigns dedicated technical supervisors to assist clients in resolving any issues that arise during the construction process, effectively minimizing on-site difficulties.

Dickson's drawing system represents the core essence of the entire production workflow. Each drawing plays a critical role in guiding the full renovation process—from the early-stage production of individual components to the overall construction sequence and on-site operational guidelines for contractors.

In this sense, construction drawings are not merely design or technical documents; they are the crystallization of design intent and craftsmanship logic, embodying the integration of designers' vision and engineers' expertise throughout the entire project life cycle

Dickson Home Furnishing Frequently Asked Questions

Q: What is the typical project cost?

A: The cost of Dickson whole-home furnishing projects is approximately USD400 – 500 per square meter. Dickson provides: built-in furniture (including kitchen systems), wall system materials (background walls, doors, decorative panels, hanging wall panels, corner aluminum profiles, sinks, shower trays, shower glass, mirror cabinets, etc.).
Items not included: construction labor costs, air conditioning systems, flooring materials, auxiliary materials, toilets, faucets, kitchen appliances, curtains, and door locks.

Q: What is Dickson Private Customization Service?

A: It is a one-to-one in-depth consultation service between clients and Dickson's Founder, Chairman, and Chief Designer, Mr. Dickson Leung.
The service provides integrated home furnishing design, including Full-space interior design, complete construction drawing development and refinement, full-process project follow-up service and training for construction teams. All aimed at optimizing spatial planning and creating an elevated lifestyle experience.

Q: Who designs my home?

A: Designs are led by Dickson Chief Designer Mr. Dickson Leung, winner of the Golden Dot Design Award, together with a professional design team composed of experienced industry designers.
The team provides: Space planning, Design development, 3D visualization, Furniture layout planning, Soft furnishing coordination and Full home design consultancy.

Q: How is Dickson different from other interior design companies?

A: With over 40 years of independent furniture R&D and manufacturing experience, Dickson operates its own production facilities and advanced manufacturing systems valued at over RMB 200 million in equipment investment.
Our product range covers living rooms, dining rooms, bedrooms, studies, wine cellars, kitchens, bathrooms, outdoor furniture, wall systems, door-wall-cabinet integration, and home accessories. Materials are primarily sourced from Italy and Germany, and the company holds over 100 design patents. With deep expertise in furniture functionality, durability, aesthetics, and spatial integration, Dickson seamlessly combines furniture systems with interior design to achieve optimal results.

Q: What is "Elegant Simplicity" ?

A: It is a new private customization style developed by Dickson, combining its in-house furniture product system with industrial design technology.
The design philosophy focuses on achieving a balance between luxury and simplicity.

Q: Is pricing different between private customization and retail customers?

A: Product pricing remains the same. The difference lies mainly in the level of design and home furnishing service provided.

Q: How can I access Dickson Private Customization Services?

A: Customers may contact Dickson via the official website, customer service hotline, or any nationwide showroom.
By providing floor plans and requirements, Dickson headquarters will prepare a preliminary design proposal and respond to all inquiries in detail.

Q: Can I communicate directly with the designer?

A: Yes. Showrooms can arrange dedicated assistance. Clients are welcome to visit Dickson headquarters to view real project cases, tour production facilities, and directly discuss design details with Chief Designer Mr. Dickson Leung.

Q: What are the advantages of Dickson private customization?

A: With origins in interior design and construction, and over 40 years of experience in furniture development, Dickson integrates professional furniture expertise with deep interior design knowledge.
By centralizing resources, we deliver higher-quality design and services at more efficient overall cost, offering clients a superior value solution.

Q: How does Dickson ensure transparency in construction and procurement?

A: Dickson only provides design services and product systems, and does not directly undertake construction work. This ensures clear responsibility and eliminates conflicts of interest.
We also provide training for construction teams and supply comparative information on materials and brands, allowing clients to independently evaluate and select suppliers. Clients are advised to work with experienced and reputable contractors.

Q: How is construction quality ensured?

A: All projects include detailed construction drawings and visual renderings. Construction teams receive technical training, while Dickson headquarters and showroom teams provide continuous supervision and coordination throughout the project until completion.

Q: Can I use Dickson services for an already furnished or fully renovated home?

A: Yes. Furniture arrangement and soft furnishing coordination are also part of Dickson's design services.

DICKSON PRODUCT

Dickson operates a mature and fully integrated in-house R&D and manufacturing base, making it one of the few modern furniture companies in the industry that combines research and development, design, production, and sales within a single system.

With more than 40 years of craftsmanship heritage and continuous technological refinement, the brand has accumulated extensive manufacturing expertise. From original design development, material selection, to precision production and finishing, every stage is independently controlled under strict high-end manufacturing standards. This ensures consistent product quality and outstanding performance across all deliverables.

Relying on its strong in-house R&D and production capabilities, Dickson has established a comprehensive and diversified full-category home furnishing product matrix. The product range covers high-end panel furniture, upholstered sofas, integrated kitchen systems, custom wardrobes, decorative home accessories, and premium interior finishing materials.

Rather than relying on fragmented furniture pieces, Dickson adopts a systematic home furnishing approach. From hard furnishings to soft furnishings, the brand ensures unified materials, color palettes, and craftsmanship standards across all products, achieving a highly coordinated and coherent home environment.

In terms of spatial application, Dickson provides full-scenario coverage, including living rooms, dining areas, kitchens, bedrooms, bathrooms, and outdoor leisure spaces, comprehensively meeting diverse lifestyle needs.

With a unified design language and consistent production processes, Dickson is able to deliver fully customized living environments with cohesive style and stable quality—achieving a true one-stop whole-home integrated furnishing solution.

“ A strong product makes a strong enterprise;
A strong enterprise makes a strong nation.
Intelligence achieves success; integrity sustains it. ”

—— Dickson Leung

Kitchen

DFQ6800Kitchen

Dickson kitchen cabinetry inherits over 40 years of dedication and craftsmanship in furniture making. Drawing on extensive manufacturing expertise in the furniture industry, and integrating modern technology with energy-saving and environmental principles, we are able to create ideal contemporary kitchens that combine stylish aesthetics with outstanding quality and performance.

DFO7088 Bookcase

Blending natural wood with minimalist lighting, this design creates an aesthetic space that goes beyond simple storage.

The cabinet features transparent tempered glass sliding doors, offering a light, smooth, and effortless opening experience. Multiple size configurations are available for flexible combination, making it suitable for both refined compact corners in smaller homes and full-wall storage systems in large residences, allowing seamless customization according to spatial needs.

DFH330 TV Cabinets

Multiple configuration options allow it to function as a TV cabinet as well as a book storage unit. It can also serve as a display cabinet or a feature backdrop wall. This all-in-one design integrates multiple functions into a single system, bringing practicality and refined taste together in everyday living.

DFT6262 Dining Table

Featuring an innovative dual-table modular splicing design, this dining table adapts seamlessly to a variety of dining scenarios, breaking away from the traditional limitations of long dining tables.

The tabletop showcases evenly proportioned inlay patterns crafted from American black walnut with natural figured grain, delivering an elegant and refined aesthetic.

An integrated glass lazy Susan provides smooth rotation, making it equally suitable for both Chinese-style shared dining and Western-style individual servings. Within the harmony of square and circle, it reflects the richness of everyday life experiences.

225 Leather Double Bed

Featuring an Italian-imported genuine leather headboard, the surface offers a refined, soft-touch and skin-friendly texture.

The bed frame is finished with a high-gloss piano lacquer, delivering a warm, elegant, and premium visual appeal.

Built-in five-hole power sockets are integrated on both sides of the headboard, paired with floating drawer-style bedside cabinets, ensuring both convenience and functionality.

This design achieves a perfect balance between aesthetics and practicality, bringing beauty and usability into harmony.

The wardrobe combination series, meticulously crafted by Dickson Furniture, features natural wood veneer finishes paired with imported wallcovering back panels, enhanced by integrated lighting to create a refined, modern aesthetic.

Equipped with premium German-imported hardware, the system ensures exceptional durability and structural stability.

With flexible modular configurations and customizable height options, it provides a fully tailored storage solution designed to achieve optimal organization and spatial efficiency.

Dickson Bathroom

The Dickson bathroom series is defined by clean lines and a pure, refined color palette, creating a spacious and airy visual impression.

An integrated DuPont solid surface basin is paired with a mirrored storage cabinet and built-in LED lighting strips, combining practicality with elegant design. The glass partition enables a clear dry-wet separation, keeping the space organized and enhancing transparency, eliminating the sense of confinement often found in traditional bathrooms.

From matte stone countertops to precision-crafted metal fittings, every detail is carefully refined to express a restrained yet premium texture, delivering a private bathroom space that is both luxurious and comfortable.

Dickson Furnishing

Dickson home accessories are inspired by minimalist design and natural aesthetics, carefully selecting authentic materials such as genuine leather, solid wood, and stone to create refined pieces that balance functionality with artistic expression.

From handcrafted ceramic tableware and geometric vases, to softly textured leather rugs, vibrant original artworks, and creatively woven decorative objects, each item reflects a dedication to detail and craftsmanship.

Every piece is designed to bring a sense of ritual and understated elegance to the living space, enhancing the atmosphere with just the right amount of artistic presence.

Become Our Overseas Distributor

Join Us • Build Global Home Furnishing Business

With over 20 years of dedication to furniture manufacturing, Dickson Furniture upholds original design, superior craftsmanship and consistent quality. We have earned long-term trust from global partners through reliable delivery and strong reputation.

Guided by mutual success, we sincerely invite qualified partners worldwide to join us as official overseas distributors for sustainable growth and long-term value.

Our Strengths

- 20+ years of professional manufacturing & export experience
- Mature supply chain and stable quality system
- Original designs matching global mainstream home aesthetics
- Total home solution: product selection, layout planning, 3D renderings
- Strict quality control compliant with international standards
- Trusted brand for long-term partnership

Distributor Full Support

- Protected territory to prevent cross-region sales & price disruption
- Full brand materials: catalogue, VI system, showroom design
- Comprehensive training: sales, product, installation, after-sales
- Local marketing support: exhibition & promotion assistance
- Flexible orders, on-time delivery, reliable spare parts supply
- Tiered incentives: annual rebates, new product priority, subsidies

Partnership Requirements

- Registered local business with furniture / home furnishing experience
- Own physical showroom, store or mature sales channels
- Accept Dickson brand values and quality standards
- Good reputation, stable finance and commitment to market development

We welcome inquiries from qualified buyers who align with our vision and are eager to bring Dickson Furniture's premium collections to new audiences. Let's create sustainable value—one partnership at a time.
